## PESTlogics: Stormwater BMPs

### Digital Stormwater BMP Inspection Records

PESTlogics simplifies the process of inspections and documentation of maintenance activity associated with stormwater detention ponds and other stormwater practices. By using online digital forms, inspecting stormwater Best Management Practices (BMPs) and managing photos is simple and quick. Using PESTlogics, you can record BMP locations on digital maps, document inspections, and record other important information related to maintenance such as corrective actions required.

### How does it work?

You can inspect BMPs in just a few easy steps. All you need is access to PESTlogics on a mobile tablet or smart phone:

1. Register for PESTlogics and log into your account.
2. Identify detention basins and other BMPs on your property using the digital maps in PESTlogics.
3. Next - in the field on your mobile device - select a BMP for inspection and complete the digital inspection form.
4. If desired, take pictures and record notes of specific issues or results of best management practices. Hit SAVE.
5. Now you have a digital record of your stormwater BMP inspection.

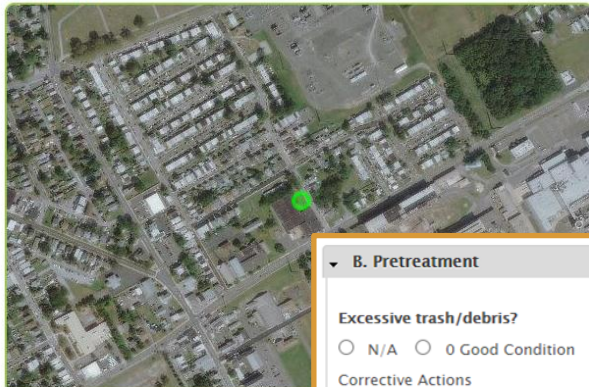

### Go Digital with Stormwater Inspection Forms

To get started using PESTlogics's Stormwater Inspection forms or to schedule an online demo/training session, please contact the CWQE by emailing [support@cwqe.org](mailto:support@cwqe.org) or calling 855-227-1202.
